

Your files are already in S3. Your team should be able to use them.

BucketDesk is a file workspace for the Amazon S3 buckets in your own AWS account. Staff browse, preview, search and share files in the browser. They never see buckets, policies or keys, and nothing is copied out of your account.

SOUND FAMILIAR?

- Staff ask engineers to fetch files out of S3
- Console logins or IAM users handed out so someone can open a PDF
- An internal upload and download tool nobody wants to maintain
- Files copied into Dropbox or SharePoint, then out of sync

YOUR BUCKET, YOUR IAM

Your AWS admin launches a guided CloudFormation stack that creates a scoped IAM role. No access keys change hands, and access covers only the buckets and prefixes you approve. No CORS changes, agents or servers in your account.

WHAT YOUR TEAM GETS

- Previews for PDF, Office, images (including HEIC), audio and video
- Share links that expire and can be revoked
- Zip inspection and extraction without downloading
- Glacier and Deep Archive restores with cost shown first
- Viewer, operator and admin roles
- Activity history with CSV audit export

PRICED PER WORKSPACE, NOT PER SEAT

Starter

Free. 1 owner, 1 viewer, 1 bucket

Pro, \$100/month

5 operators, unlimited viewers, Office and media previews, sharing

Business, \$350/month

10 operators, uploads, Office editing, document AI. 14-day free trial

HOW TO START

1. Start the trial

Sign up at bucketdesk.com and start the 14-day Business trial.

2. Connect a bucket

Your AWS admin runs the guided CloudFormation stack and approves the prefixes.

3. Invite your team

Add the people who ask for files. Viewers are free on paid plans.
